

# J.A.H. Risk Management PLANT & EQUIPMENT RISK ASSESSMENTS

Drawing from the experience of projects with machine builders and machine users, our Plant Assessment Service includes on-site examination with subsequent evaluations and presentation of the results.

We analyse the workflow on the machines involving operating, and maintenance to identify the main health and safety concerns.

#### Plant Assessment includes:

- Make a list of all plant that fits the scope of the definition
- Inspect the plant and the surrounding work environment
- Review accident and near miss records
- Review manufacturers instructions for the relevant plant or machinery
- Record all identified hazards
- An analysis of the primary hazards on individual machines
- Evaluation of the existing risk reduction measures
- Judgement on compliance of machines with applicable regulations and standards
- A review of the viability of upgrading the safety of the machine
- Prioritised recommendations on approach to improve current status

The information provided can be used to plan machinery improvement programs or integrate such programs with other management initiatives.

#### Your Benefit

Our expertise and comprehensive report on the safety status of the machinery will provide you with information on which you can prioritise effective investments, thereby optimising profitability.
